

Can I Just Get a Blood Test?

Biocept is using liquid biopsies to give doctors and patients critical real-time information about cancer—with a simple blood test.

Questions for Your Doctor

1. Do you know the biomarker status for my tumor?

Liquid biopsies can help determine known biomarker status, with a simple blood test.

2. What are the risks of surgical biopsy?

There are times when surgical biopsy is a challenge—or even impossible. Liquid biopsies gives you and your doctor a new option to learn about cancer from a simple blood test.

3. Is my cancer responding to treatment the way you expect?

If targeted treatment isn't working as well as expected, liquid biopsies can help determine whether cancer has multiple abnormalities that may respond differently to different treatment options.

4. Is it possible that my cancer has changed?

Cancer can change over time, especially when it spreads or comes back after treatment. Liquid biopsies can help you and your doctor determine whether changing a treatment plan could lead to more effective results.
