

### CEE-Sure™ Cerebrospinal Fluid (CSF) Collection Tube for CSF Tumor Cells and Cell-Free DNA

The capture, isolation, and analysis of tumor material in cerebrospinal fluid (CSF) is helpful to assess cancer involving the central nervous systems (CNS), particularly metastatic disease.

The CEE-Sure™ CSF Collection Tubes utilize patented technology to effectively preserve whole cells, such as CSF tumor cells (CSF-TCs) and cell-free deoxyribonucleic acid (cfDNA).

The CEE-Sure CSF Collection Tubes prevent cell lysis and antigen degradation so CSF can be preserved and transported at room temperature. In addition, it improves cell capture in a microchannel, inhibiting cell clumping and clogging of microfluidic devices. CSF collected in CEE-Sure CSF Collection Tubes enhances the evaluation of cellular biomarkers by immunocytochemistry and FISH, as well as next generation sequencing (NGS) and PCR based evaluation of cfDNA.

#### Advantages

- Preservative stabilizes cellular and genetic contents including CSF-TCs and cfDNA
- Ambient temperature stability—no cold pack or ice necessary for shipping
- Patented transport media
- Efficacy in thousands of tests as part of Laboratory Developed Tests analyzing both CSF-TCs and cfDNA

#### Specifications

<b>Manufacturing</b>	In accordance with ISO 9001
<b>Tube Volume</b>	5.0 mL nominal liquid capacity
<b>Tube Type</b>	Plastic
<b>Shelf Life</b>	18 months
<b>Storage Temperature</b>	18°C – 25°C
<b>Shipping Temperature</b>	15°C – 30°C
<b>Stability</b>	CSF Tumor Cells: Up to 4 days

Product	Product Number	Pack Size
CEE-Sure™ CSF Collection Tubes, RUO, Plastic	BIOC-CSF-2365	1 box of 100 tubes, 10 boxes of 100 tubes (1000 tubes total)

For more information about the CEE-Sure™ Cerebral Spinal Fluid Collection Tube, contact your local Biocept Laboratory Representative or **Customer Service** at **888.332.7729** or [customerservice@biocept.com](mailto:customerservice@biocept.com).

Collection Tubes Are For Research Use Only. Not for use in diagnostic procedures.
